Transportation Account Codes for Permanent Change of Station

Background: Transportation Account Codes (TACs) are required by the Department of Defense (DoD) for the shipment/storage of government owned and personal property. The TAC relates to POETs (lines of accounting) and is used by DoD for high-level funding validation. Funding validation is not performed during USCG TAC validation by DoD Shipper Systems. The Transportation Global Edit System (TGET) is the reference for the use of TACs. The USCG TAC Coordinator (FINCEN AP/2) is responsible for the maintenance of data in the TGET.

Issue: DoD does not allow creation of request for shipment for household goods (HJG), non-temporary storage (NTS), personally procured moves (PPM) or the shipment/storage of personally owed vehicles (POV). The TACs associated with these requests appear on the document authorizing the entitlement. The TAC must reside in TGET with the appropriate billing code for type of invoice that will be generated.

Solution: The USCG TAC Coordinator will maintain the following TACs in the TGET for Military and Civilian permanent change of station (PCS) Orders to be used by mLINQS

Military PCS

                ZCGH – HHG shipments

                ZCGN – NTS storage and delivery out of NTS

                ZCGV – POV shipment and storage

                ZCGP – PPM

Civilian PCS

                ZZHG – HHG shipments

                ZVCG – POV shipments

                ZVNG – NTS
